DETAILED ACTION

Election/Restrictions

 Claims 1-8 and 16-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected claimed invention, there being no allowable generic or linking claim. Election was made without traverse in Paper filed on 10/14/2003.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as sat forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 9-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over
 Neal et al. [US 5,967,824] in view of Scheer et al. [US 5,619,660].

Regarding claims 9 and 11-12, Neal et al. disclose a system (figure 8) comprising an array modules (421) and a plane, each module having a first connector configure to couple with a compatible corresponding second connector (301) which is mounted to the plane.

Neal et al. disclose the instant claimed invention except for the interlock device and the interlock device operation.

Scheer et al. disclose an interlock device (figure 6) comprising a securing member (623) configured to be movable to a first position to engage an associated

module and thereby arrest movement between the associated module's first connector and a corresponding second connector (640), the securing member being further configured to be movable to a second position in response to an authorization command to disengage the associate module and thereby allow relative movement between the associated module's first connector and corresponding second connector (column 9, lines 55-column 10, 23).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the interlock device of Scheer et al. with the module of Neal et al., for the purpose of preventing unauthorized removal of the modules.

Regarding claim 10, Neal et al. disclose the instant claimed invention except for the interlock device including an actuator configured to move the securing member between the first and second positions in response to the authorized command.

Scheer et al. disclose a motor/lock (625) being the interlock device.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a motor/lock for the interlock device of Neal et al., as modified by Scheer et al., for the purpose of providing remote activation/authorization.

Regarding claims 13-15, Neal et al. in view of Scheer et al. further disclose the securing member being configured to detect when the securing member being in the first or the second position and to generate a position signal thereto (column 10, line 54 – column 11, line 3).
